Facade system

Using facade surfaces optimally

Clear added value for your facade

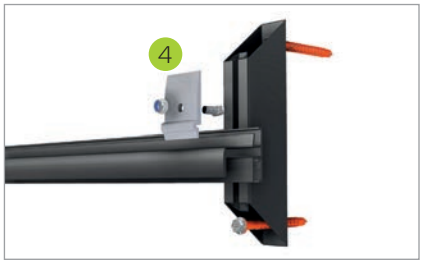
- photovoltaic installation is hung vertically in front of the facade
- Fixing set with building authority approved dowels and stainless steel screws
- visible mounting system components are available in blank aluminum or black anodised
- mounting modules in portrait or in landscape

Product requirements

- For solid exterior walls
- For cold facades without insulation

Your benefits

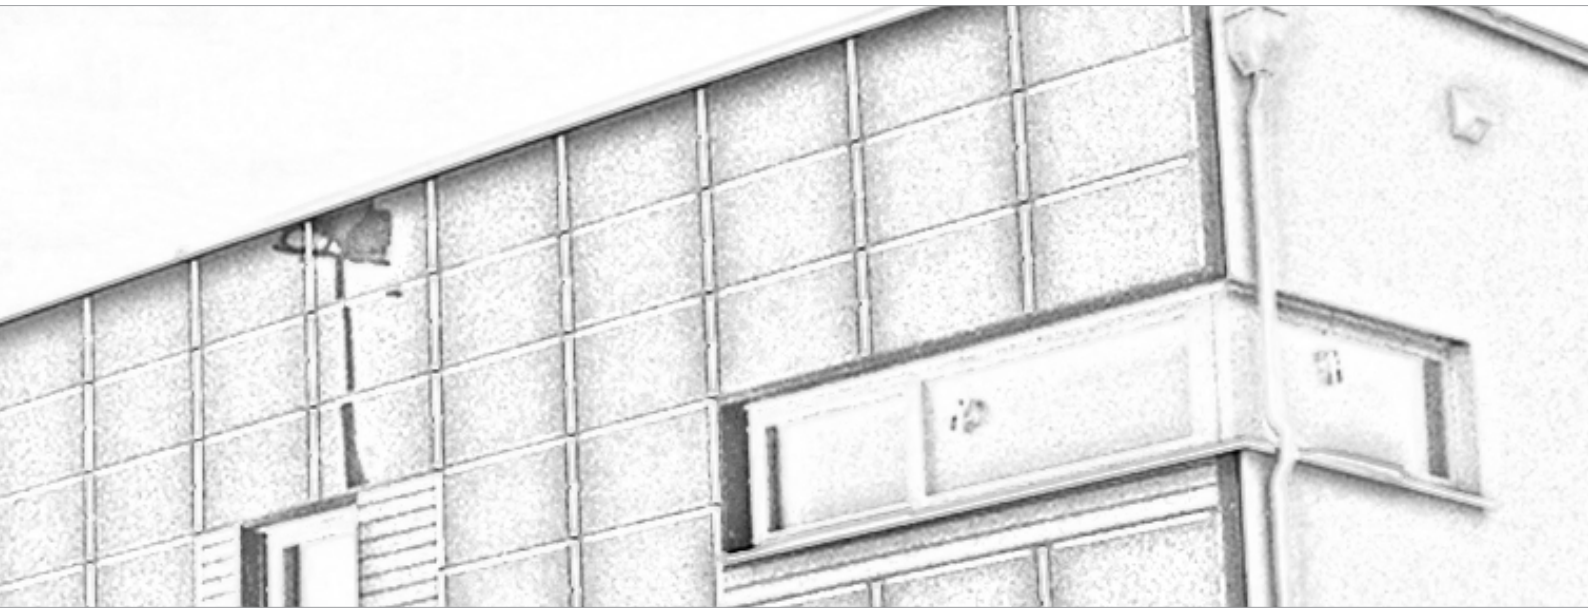
- High-quality installation aesthetics thanks to insertion technology
- Flexible system size: From a single module to the entire facade surface
- The facade is used to generate electricity
- A construction with excellent rear ventilation which hangs in front of the building but does not touch it
- pre-assembled parts



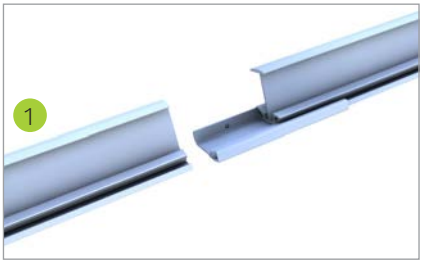
Few components - simple and fast installation

Very good rear ventilation of the modules

Dowels with technical approval



Pic	Designation
1	**Insertion rail** • Insertion rails in blank/black anodized for frame heights • Tension-free mounting
2	**Edge stop** • color-coordinated with the insertion rail • prevents modules from slipping out
3	**Socket insertion rail** • connection to the masonry in blank and black • for fixing insertion rail
4	**Cross-rail connector** • safe connection due to force and form closure • completely pre-assembled
5	**Slip guard** • protecting the modules against slipping • for fixing perforated sheet



Connecting insertion rails

Socket set, optional in blank and black
